Barraquer-Troutman Needle Holder, 10cm, curved, with lock

NEW ITEM

The Castroviejo Micro Needle Holder is a precision instrument designed for the most demanding microsurgical suturing tasks in scientific and biomedical research. The round handle provides smooth, intuitive rotation between the fingers, enabling effortless needle repositioning without releasing the instrument — a key advantage during intricate suturing under the microscope.

The micro-pattern jaws with slightly blunted tips offer a secure and controlled grip on the finest micro needles. The integrated locking mechanism maintains constant, reliable clamping force without continuous hand pressure.

Use only with micro needles of less than 0.2 mm diameter. Never use with oversized needles as this may permanently damage the fine jaws.
