

Multipurpose Forceps - Angled/Smooth/14.5cm/0.2mm Tip Diameter

Balanced instruments are designed to put the center of gravity between the thumb and index finger. This is accomplished by adding a slight counter weight to the proximal end of the instruments. The design enhances tactile feel, aiding in better control and precision. These multipurpose forceps can be used in different surgical techniques. The tips are configured to enable their use as dilators at the front but also needle holders and tying forceps further in the back.
